EXPERIENCE

Toga.az – Multi-Vendor Fashion Marketplace | WordPress, WooCommerce, Dokan, Docker *May 2026 - Present*

- **Software Lead** (2-person eng team), May 2026–present — built and launched Toga.az, a multi-vendor marketplace on WooCommerce/Dokan, scaling to 250 SKUs across 5 onboarded vendors pre-launch.
- Extended Dokan/WooCommerce via custom hooks and block-based template overrides instead of forking core, shipping full catalog/checkout/vendor functionality tailored to the Azerbaijani market.
- Built an AI-assisted dev workflow (Claude Code for fixes + deploys) that substantially compressed the fix-and-ship cycle for routine tickets, letting a 2-person team maintain a fast release cadence.

PROJECTS

AICC Automated Safety Tester | Python, Playwright, Google Gemini API *Spring 2026*

- Designed and built an end-to-end red-team testing framework for a university AI chatbot, automating adversarial prompt delivery across 6 safety categories via a dual-mode pipeline (single-turn broad coverage + multi-turn escalation up to 6 turns), eliminating manual safety review.
- Integrated Google Gemini 2.5 Flash as an automated policy-grounded judge, classifying chatbot responses as PASS/FAIL with structured JSON rationale.
- Achieved a 97% pass rate across 33 multi-turn interactions, catching a subtle foul-language failure that manual review would likely have missed.

AI Path-Planning and Reinforcement Learning Systems | Python *Sep 2025 – Present*

- Implemented four AI systems in a Pacman-based environment: search algorithms, multi-agent planning, adversarial agents, and reinforcement learning.
- Built agents using DFS, BFS, UCS, A*, alpha-beta pruning, expectimax, Q-learning, and value iteration.
- Engineered admissible & consistent heuristics reducing node expansions by up to 70% on complex mazes.

TemporalBertSpam – Transformer-Based Spam Detection | Python, PyTorch, HuggingFace *Spring 2026*

- Designed a custom NLP architecture combining DistilBERT embeddings with a 4-layer Transformer encoder to jointly model message semantics and temporal behavioral patterns for SMS spam detection.
- Outperformed DeBERTa baseline (AUC 0.90, F1 0.84) by fusing temporal features into a unified Transformer pipeline trained on a ~43K-row SMS dataset stored in Azure PostgreSQL.
- Collaborated with two teammates on data pipeline design, model architecture, and evaluation; project developed as part of a graduate-level NLP course.

EDUCATION

Duke University, Durham, NC **Durham, NC**
Pratt School of Engineering
Master of Science in Electrical & Computer Engineering, ML/AI Track *Sep 2026 – May 2028*

University of South Florida, Tampa, FL **Tampa, FL**
Bellini College of Artificial Intelligence, Cybersecurity and Computing
Bachelor of Science in Computer Science *Aug 2022 – May 2026*
GPA: 3.64 / 4.0

Honors & Awards

USF Green & Gold Presidential Scholars Award (2022–2026), Dean's List USF (Fall 2022, Fall 2025)

LEADERSHIP & AFFILIATIONS

President, Azerbaijani Student Association (ASA), USF *Aug 2025 – May 2026*

- Led organizational operations, events, and community outreach for USF's Azerbaijani student chapter (member since 2022).

ADDITIONAL INFORMATION

Languages: Azerbaijani (Native), English (Full Proficiency), Turkish (Full Proficiency), Russian (Elementary Proficiency)
Programming & Development: Python, C, C++, C#, Ruby
ML & Algorithms: scikit-learn, PyTorch, TensorFlow, Neural Networks
Tools & Infrastructure: Emacs, VS Code, Linux Bash, Playwright, OpenAI API, Google Gemini API, Git/GitHub
Specialization: Artificial Intelligence, Machine Learning, Reinforcement Learning, and AI Safety Systems
